Blu'Hox™ 30 plus30

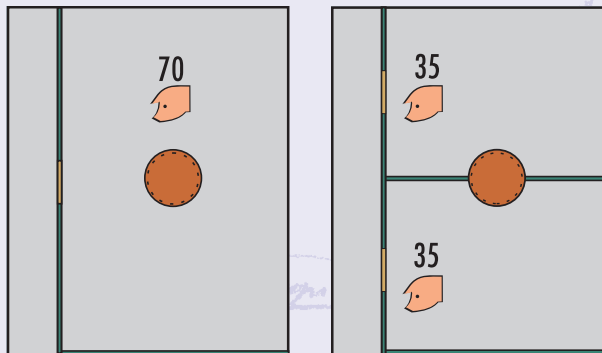

Especially for piglets
from 5 kg onwards

Blu'Hox™ plus 30

With 10 actual feeding places!

For large or small groups.

ROXELL®

Blu'Hox™

1 Natural instinct helps start-up

- Their natural rooting instinct learns freshly weaned piglets to dispense feed into the pan by means of the rotor.
- The combination of the smoothly turning rotor and an asymmetrical hopper provide a swift feed flow.

2 Optimal growth from the first day onwards

- The feed and water located in the same spot and within easy reach for the smaller piglets.
- A handy step up as part of the pan allows weaned piglets to easily reach the special weaning nipple.
- Every piglet determines its own feed and water ratio.

Blu'Hox™

3 Unequaled uniformity and stress-free piglets

- There is always sufficient space around the pan for 6 or 10 animals (depending on the Blu'Hox feeder you choose).
- No fighting for a feeding spot! All piglets, even the smallest ones, get plenty of opportunity to take feed and water in according to their individual needs.

4 Important savings

- Blu'Hox has a special pan shape with anti-waste edge.
- Blu'Hox allows an accurate adjustment of the feed level.
- Any spilled water mixes with the feed in the pan and is consumed.
